The risky and resource-consuming traditional process

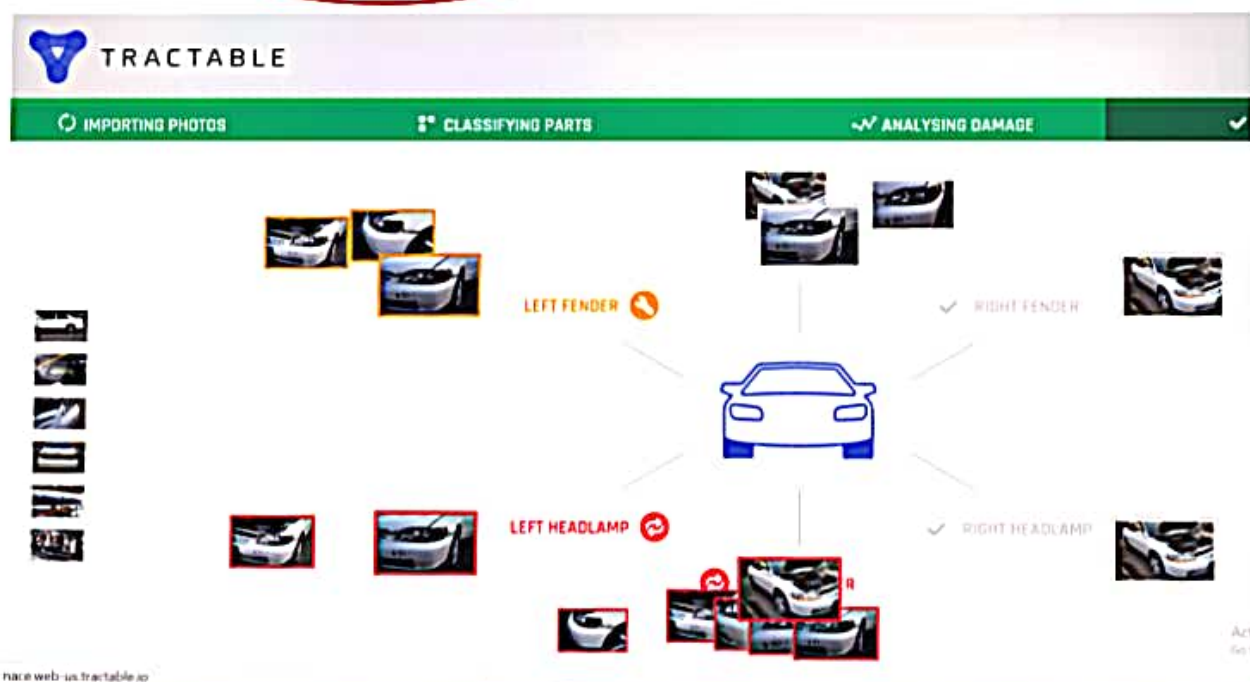

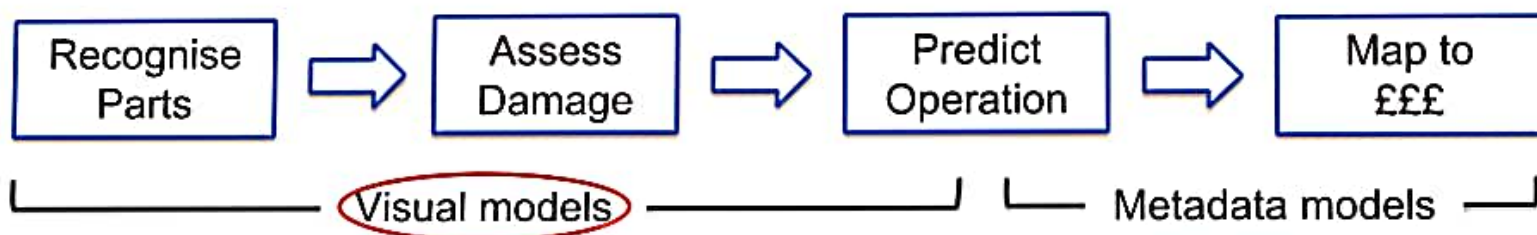

Alternative: Car damage recognition solution

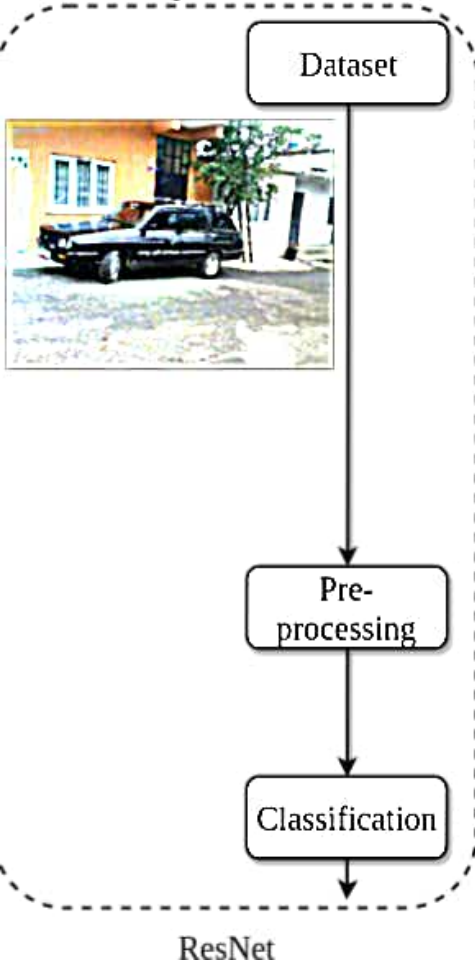

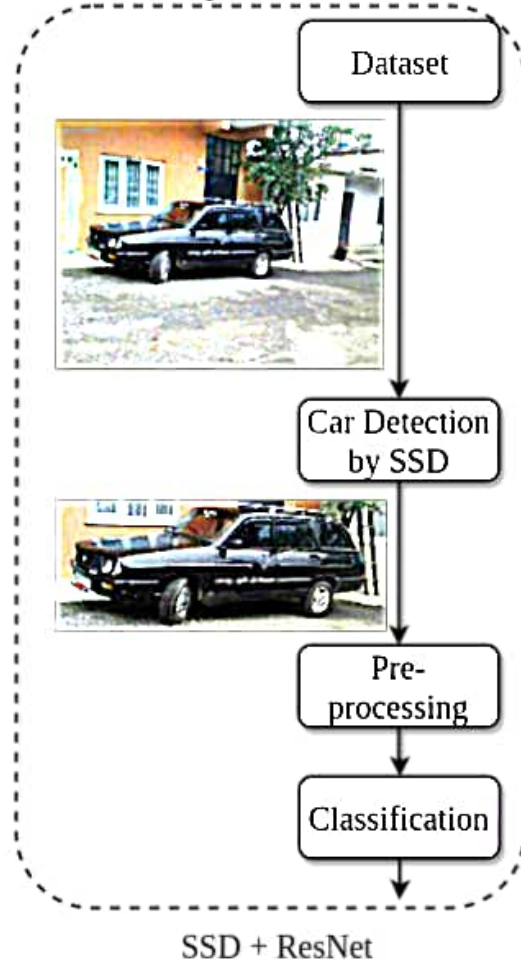

Deploying to the real world...

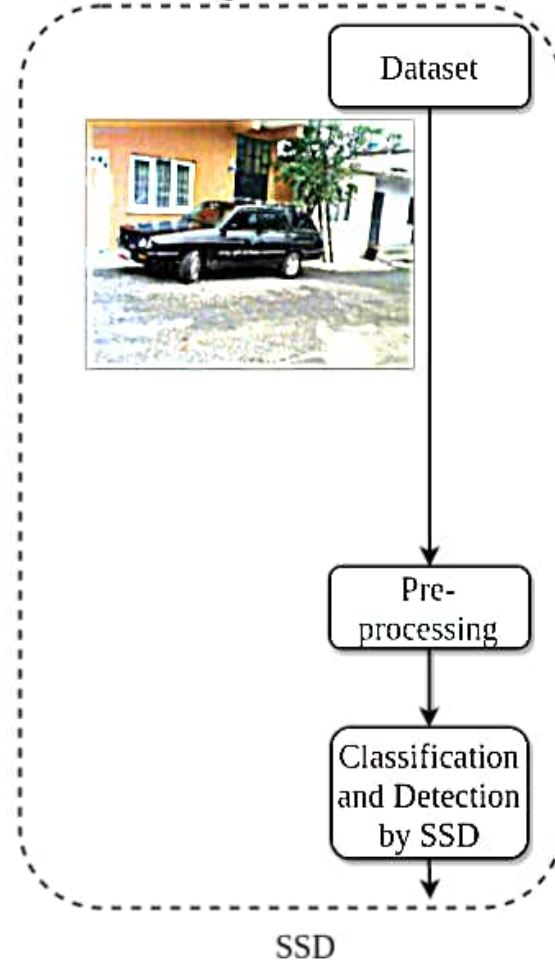

Experiment I

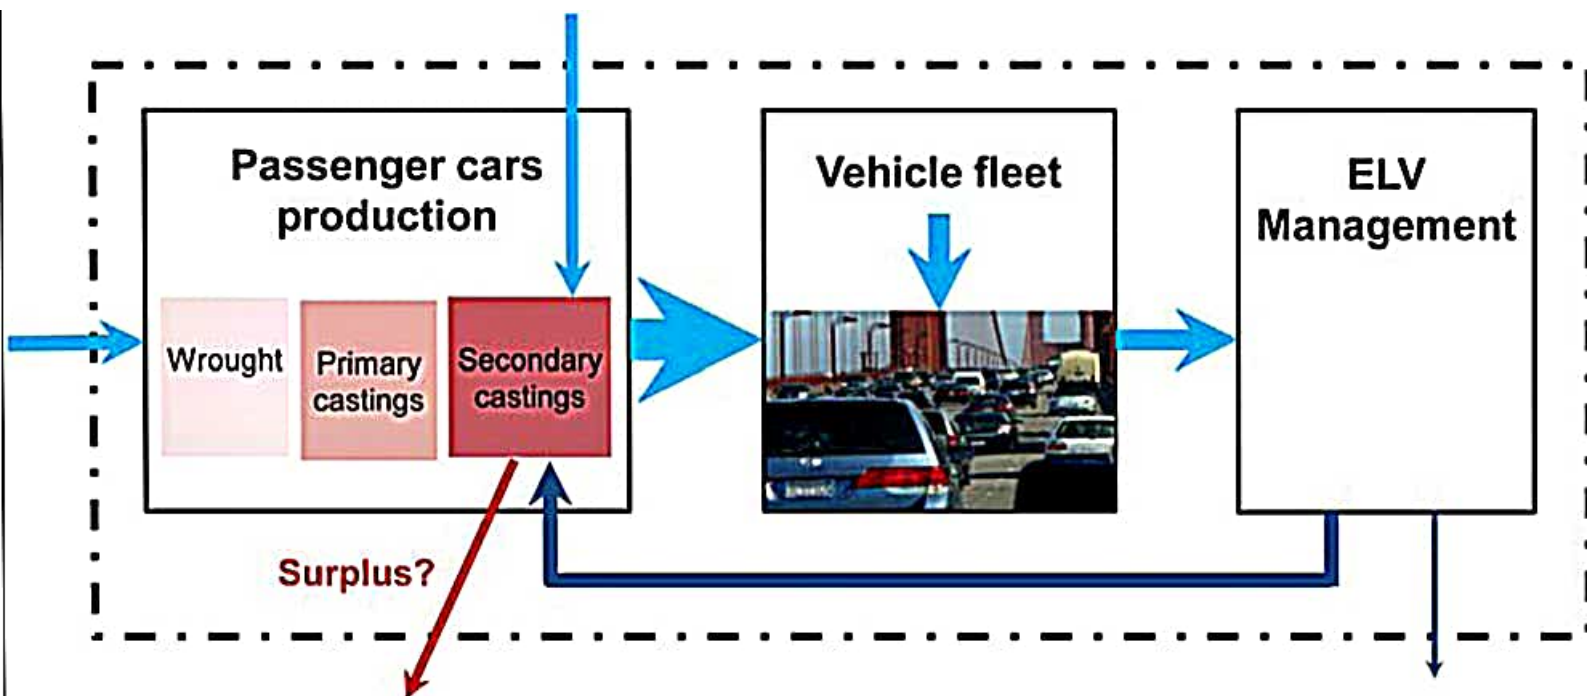

Experiment II

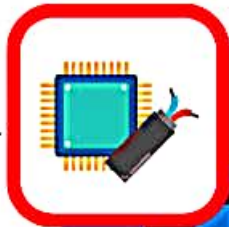

Experiment III

COPPER

Semiconductors, computer components, and the wire harness in vehicles have copper in them.

STEEL

The average car has 2,400 pounds of steel, which you can find in parts like body frame and the chassis.

BRASS

Cars from 1915 and earlier had many brass components, like brass radiators.

PLATINUM AND PALLADIUM

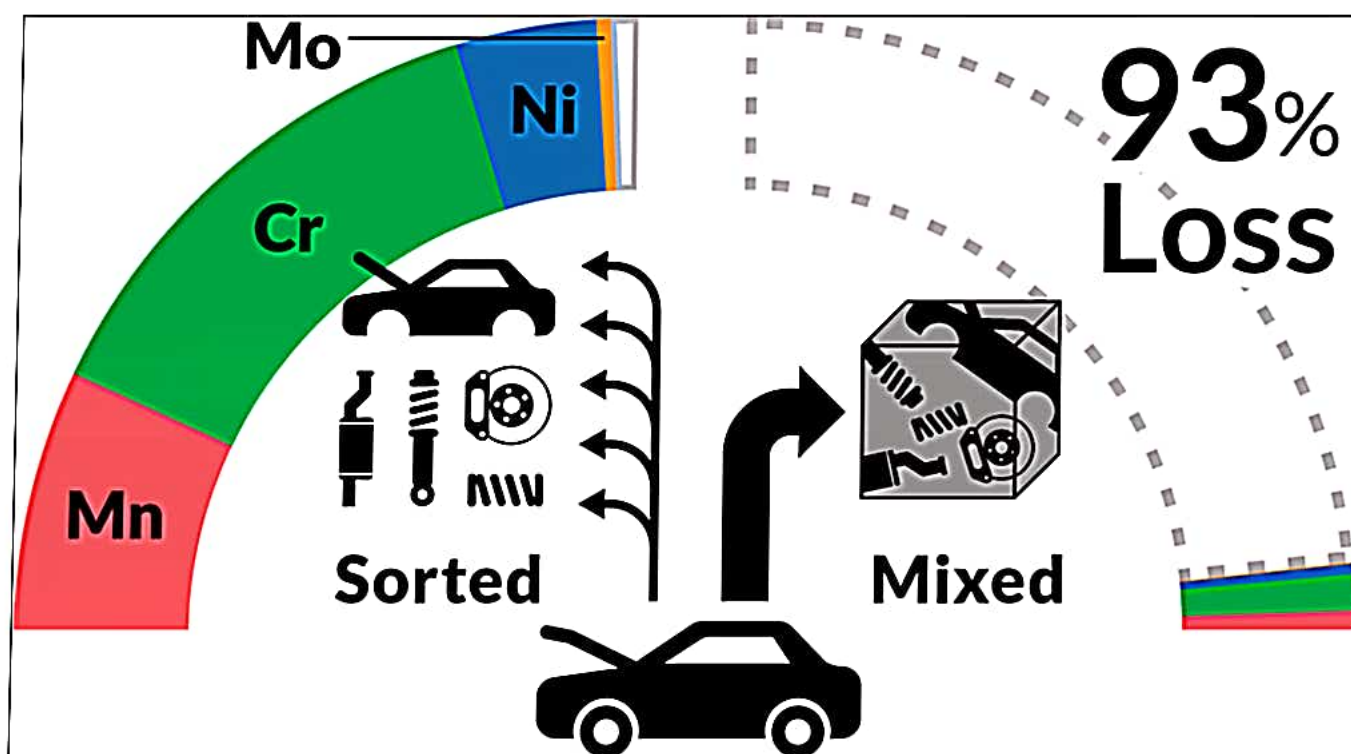

Found in catalytic converters, there aren't much of these in cars, but they're very valuable!

SCRAP CAR REMOVAL

WHAT WE DO

Thank
you!
